

“I’ve had my Sun Valley Greenhouse for four years now and it has provided my wife and I with a great deal of enjoyment doing some hobby gardening together in the backyard. Our greenhouse was installed in less than a day and then I took my time to fit up the interior just the way I wanted. I am a structural engineer and I can testify that these greenhouses are designed to withstand the strong gusty winds we get in the east end of St. John's (unlike parts of the roof on my house). We had a storm that produced a 160 km/hr gust and there has never been an issue with the greenhouse. The corrugated polycarbonate panels are strong and maintenance free. In the winter we use the extra space to store the lawnmower and barbeque while the beds are growing garlic for us in the Spring. We look forward to many more years of growing in our Sun Valley Greenhouse. Thank you, Scott and Kim.

~Tony and Shelia, St. John's
